

## EDUCATION

---

- **Northeastern University** Boston, USA  
*MS in Robotics, Concentration: Computer Science.* Sep 2023 - Present
- **Indian Institute of Technology Madras** Chennai, India  
*Dual Degree (B.Tech, M.Tech) in Engineering Design, Stream: Automotive Engineering.* Aug 2011 - Jun 2016  
*Minor in Systems and Controls Engineering. CGPA: 8.30/10.0.*

## TEACHING

---

- Fall 2023: TA for Reinforcement Learning (RL) course at Khoury College of Computer Sciences, Northeastern University.
- Spring 2022, Spring 2023: TA for RL course at Department of Computer Science and Engineering, IIT Madras.
- Spring 2016: TA for Electronics Lab course at Department of Engineering Design, IIT Madras.
- Fall 2015: TA for Computer-Aided Design Lab course at Department of Engineering Design, IIT Madras.

## PUBLICATIONS

---

- **Physics-Informed Model-Based Reinforcement Learning** (Paper | Webpage | Code)  
*Adithya Ramesh* and Balaraman Ravindran.  
*Learning for Dynamics and Control Conference (L4DC), 2023.*  
*Deep Reinforcement Learning Workshop, Neural Information Processing Systems (NeurIPS), 2022.*  
*The Multi-disciplinary Conference on Reinforcement Learning and Decision Making (RLDM), 2022.*  
*The RBCDSAI-FCAI conference on Deployable AI, 2022 (Best Paper).*

## PROFESSIONAL EXPERIENCE

---

- **Robert Bosch Centre for Data Science and AI, IIT Madras** Chennai, India  
*Research Associate* Oct 2021 - Present
  - **Physics-Informed Model-Based Reinforcement Learning**  
Research Guide: Prof. Balaraman Ravindran, Department of Computer Science and Engineering, IIT Madras
    - We apply model-based RL to robotic systems undergoing rigid body motion without contacts. We learn a model of the environment, use it to generate imaginary trajectories and backpropagate through them to update the policy, exploiting the differentiability of the model. We compare two versions of our algorithm, one which uses a standard DNN based dynamics model and the other which uses a more accurate, physics-informed neural network based dynamics model.
    - We show that, in model-based RL, model accuracy mainly matters in environments that are sensitive to initial conditions, where numerical errors accumulate fast. In these environments, the physics-informed version of our algorithm achieves significantly better average-return and sample efficiency. In environments that are not sensitive to initial conditions, both versions of our algorithm achieve similar average-return, while the physics-informed version achieves better sample efficiency. We also show that, in challenging environments, physics-informed model-based RL achieves better average-return than state-of-the-art model-free RL algorithms such as Soft Actor-Critic, as it computes the policy-gradient analytically.
- **Honeywell** Bengaluru, India  
*R & D Engineer/Scientist II, Advanced Technologies Division, Honeywell Aerospace* Jun 2018 - Mar 2021
  - **Multi-Agent Co-operation using Reinforcement Learning**
    - Considered multi-agent problems where the agents must learn an efficient communication protocol to co-operate and execute a task. Considered a representative problem where two agents with complementary sensing modalities (depth and color), have partial information about a target and must communicate, navigate to reach it simultaneously.
    - Adopted a centralized training and decentralized execution approach based on the MADDPG algorithm. Treated depth data as a point cloud and processed it using a PointCNN. Processed color data using a standard CNN. Successful in  $\sim 99\%$  of 4800 training configurations. Successful in  $\sim 59\%$  of 1200 test configurations.

## - Autonomous Navigation for Quadrotors using Reinforcement Learning

- Developed a RL based autonomous navigation system for quadrotors, that can navigate to a goal position in the shortest path, without colliding with stationary obstacles, in an unknown environment, in simulation.
- The RL agent uses the relative position of the goal and a depth image to determine which direction to move. A control algorithm then moves the quadrotor a small distance in that direction and the process repeats. Used the DQN algorithm for training. Successful in  $\sim 92\%$  of 4800 training configurations. Successful in  $\sim 72\%$  of 1200 test configurations.

## - LSTM based Speaker Recognition

- Developed a LSTM based text-independent speaker recognition system. Trained on  $\sim 2000$  hours of audio from 6000 speakers. Achieved an accuracy of  $\sim 91.8\%$  on a test dataset containing 1250 speakers.
- Explored use cases such as authentication of users in a speech based building automation system and enhancing automatic transcription of aircraft - ATC communication. Drove collaboration with Microsoft Research, India in development of light-weight recurrent neural networks for deployment on resource constrained edge devices.

## • Predible Health

*Deep Learning Engineer*

Bengaluru, India  
Sep 2017 - May 2018

## - Biomedical Image Processing

- Developed CNNs to classify nodules in lung CT scans as benign or malignant. Achieved sensitivity of  $\sim 90\%$ , specificity of  $\sim 81\%$  after performing 5-fold cross-validation on a dataset of  $\sim 40k$  images. Also experimented with CNNs for liver CT segmentation, prostate MRI segmentation.

## • Self Employed

*Entrepreneur*

Chennai, India  
Jun 2016 - Sep 2017

## - Cooking Robot

- Envisioned a system with two robotic arms and a camera, which can perceive the kitchen environment and dexterously manipulate objects, to autonomously prepare food. Initially explored classical computer vision based perception and planning & control based manipulation. Later discovered deep learning and reinforcement learning (RL).
- Delved into the fundamentals of deep learning and RL through projects and literature. Opted for deep learning based perception and RL based manipulation. Recognizing the complexity and technological advancements needed, eventually decided not to pursue the project further.

## • Airwood Pvt Ltd

*Intern*

Chennai, India  
Dec 2014 - May 2015

## - Flight Controller for Quadrotors

- Worked towards developing a flight controller for quadrotors. Developed complementary filter based state estimation algorithms and PID based control algorithms. Owned all aspects of development - software and hardware. Extensively performed flight tests.

## PROJECTS

---

### - Mixed State Entanglement in Quantized Chaotic Systems (Master's Thesis) ([Link](#))

Research Guides: Prof. Arul Lakshminarayan, Department of Physics, IIT Madras

Prof. Sandipan Bandyopadhyay, Department of Engineering Design, IIT Madras

- Studied entanglement in mixed states of quantized chaotic systems, focusing on the quantum coupled standard map. Explored entanglement dynamics with varied interaction strengths and environment dimensions. Identified a critical dimension where entanglement decreases, potentially posing challenges in contexts like quantum computing.

### - RL Repository ([Link](#))

- Implemented RL algorithms such as DQN, A3C, DDPG, MADDPG, PPO, SAC, etc, from scratch in Pytorch. Tested the implementations on tasks from OpenAI Gym, Deepmind Control Suite. Open sourced the code on Github.

## - Chaotic Dynamics in Robotic Manipulation (Course Project)

- Studied chaotic dynamics in robotic manipulation that can occur for certain values of controller gains and model mismatch. Simulated a parallel manipulator, a planar 5-bar, to track a periodic trajectory. Calculated Lyapunov exponents and plotted phase space plots to identify chaotic dynamics.

## - Hardware Projects

- Worked on a few projects that involve both software and hardware, such as a ground robot, automatic transmission for a geared bicycle, electric assisted bicycle, WiFi based control of electric home appliances, dimmer circuit for incandescent light bulbs, etc, as a hobby.

## SKILLS

---

- **Operating Systems** - Linux, Windows
- **Programming Languages** - Python, C, C++
- **Deep Learning Frameworks** - Pytorch
- **Scientific Computing** - Numpy, Scipy, Mathematica, Matlab
- **Visualization Tools** - Matplotlib, Tensorboard
- **Robotic Frameworks** - ROS
- **Robotic Simulators** - Mujoco, Deepmind Control Suite, OpenAI Gym, Airsim, Gazebo
- **Development Tools** - SSH, Docker, Git
- **Microcontrollers** - Arduino, NodeMCU
- **CAD** - Autodesk Inventor
- **Document Preparation** - Latex, Microsoft Office

## AWARDS AND SCHOLASTIC ACHIEVEMENTS

---

- Awarded the NTSE (National Talent Search Exam) scholarship by NCERT, Government of India in 2007.
- Awarded the KVPY fellowship by Department of Science and Technology, Government of India in 2011.
- All India Rank 2264 in IIT Joint Entrance Examination 2011 (top 0.45% of 0.5 million candidates).
- All India Rank 642, Tamil Nadu State Rank 20 in All India Engineering Entrance Examination 2011 (top 0.06% of 1.1 million candidates).
- Featured in the top 1% of 40,000 candidates in the National Standard Examination in Physics 2011 and subsequently participated in the Indian National Physics Olympiad 2011.
- Cleared qualifying stages and participated in the Indian National Mathematics Olympiad 2010 and the Indian National Olympiad in Informatics 2009, 2010.

## RELEVANT COURSE WORK
